# AGORA DEL SAPERE

Un viaggio verso la ISS e la seconda missione di  
Samantha Cristoforetti | Agorà del sapere: gite  
virtuali, tour e laboratori didattici online  
([agoradelsapere.it](http://agoradelsapere.it))

How do you go from being a middle and high school student to working on Samantha Cristoforetti's mission? Is there only one path, or are there many? And what does it mean to work on the experiments that are launched and performed on the International Space Station?

In this webinar they talk about what the world of space is, what choices to make (and what inspirations to follow) to enter it, but also what it is like to work for the International Space Station.

■

# Our expert

Chiara Piacenza is Utilization and Science Planning Lead for the European Space Agency and is responsible for the experiments that will be carried out during Samantha Cristoforetti's mission at the International Space Station in 2022. She worked as a Business Developer at Argotec and did a master's thesis on how to design a lunar base to protect astronauts from space radiation at the European Astronaut Centre in Cologne.
